

Hyperwave IS/7

Scalable, Extensible, Traceable

Hyperwave IS/7 forms the basic infrastructure for all other Hyperwave products and solutions. The information server provides all basic functionality such as data, process and security management.

The Architecture

Hyperwave IS/7 stores all documents and their associated metadata in a standard relational database. This assures ideal availability and security for the data. Additionally, powerful search functionality allows you to search in texts and metadata for the information you need.

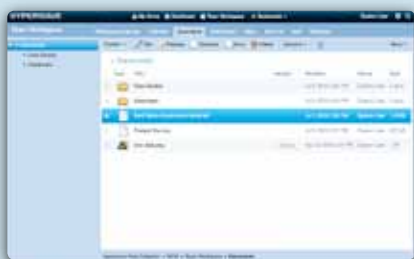

Hyperwave IS/7 offers a range of services covering all basic Enterprise Content Management (ECM) functionality.

Using completely web-based technologies, Hyperwave IS/7 and its solutions can be deployed immediately and everywhere, without a major rollout.

Platform Independence

One of the most outstanding features of the information server is that it is platform independent. Hyperwave IS/7 will basically run on any major server platform. For you as a user, this means that you have free choice of hardware and operating systems. It is also possible to change from one

platform to another at any time. A standard Hyperwave release includes both the Microsoft Windows and the Linux versions of the server, so even if you switch platform, there are no extra license costs. Both versions naturally include comprehensive support and guaranteed upgrades.

YOUR WISH IS OUR COMMAND

Our aim is to fulfill customer requirements rather than the specifications of IT manufacturers.

” *Hyperwave realizes that our IT environment is not homogenous, and manages to fit in seamlessly.*

Scalable

Another outstanding feature of the Hyperwave IS/7 is its scalability. IS/7 literally grows according to your requirements. You can start with a single department with 50 users or fewer and expand to any number of departments and over 100,000 users at any time.

The sky is the limit as far as increasing requirements are concerned. The only thing that needs to keep pace is your hardware infrastructure, our software will not need to be reinstalled or changed.

Extensible

Hyperwave IS/7 contains a complete, object-oriented application framework, based on JavaScript. This allows the building of tailor-made applications, or allows you to customize and expand on standard products and solutions.

Regardless of whether the applications are developed by you in-house, by our programmers here at Hyperwave or by a system house of your choice, Hyperwave IS/7 guarantees data integrity and compliance to access control guidelines. The Hyperwave application and Web services framework make it easy and fast to integrate IS/7 into your existing infrastructure and to connect to external systems.

Functions

Enterprise Content Management

- ✓ Hierarchical document management
- ✓ Version control
- ✓ Support for over 200 document formats
- ✓ Expandable metadata
- ✓ Active and automatic link management

Data Retrieval

- ✓ Comprehensive fulltext search
- ✓ Automatic search agents
- ✓ Connection with external sources
- ✓ Search for experts
- ✓ Search metadata

Security

- ✓ Integrated user and group management
- ✓ Connection with established LDAP and Active Directory systems
- ✓ Access control on all content
- ✓ SSL
- ✓ Single Sign-On (NTLM or client-side certificates)

Open Standards

- ✓ Web services
- ✓ SSL
- ✓ WebDav
- ✓ HTML/CSS/JavaScript

SYSTEM REQUIREMENTS

Browser

Internet Explorer 7.0 and higher
Mozilla Firefox 3.6 and higher

Operating system

Windows Server 2003, 2008
RedHat Enterprise Linux 5
SUSE Linux Enterprise Server 11

Database

Oracle 11gR2
MS SQLServer 2005 SP3
MS SQLServer 2008 SP1
